

Year 7

Continuing from Foods in Season

We are going to think about the type of suitable packaging.

- Think about safeguarding the texture, taste and freshness
- It has to be cost effective
- Consider recycling
- You need to be able to distinguish your product from other products on the market.
- Think about transportation
- Storage of your product for example in a vending machine, in a fridge or on a shelf.

List types of possible packaging.

Why is packaging important?

What are we expecting packing to do? (What is its purpose)

Sketch and label suitable packaging showing as much information as possible for example bar code, recycling symbol, and products name. These are just a few examples.
